
Helicopter Simulator 2014: Search And Rescue Digital Download

Download >>> <http://bit.ly/2SKBgg0>

About This Game

Become an emergency pilot and test your skills to their limits, as you sit in the cockpit of an emergency helicopter, across more than 40 challenging missions. Choose from 8 models of 'copter, each varying in size, ability and specs.

Fighting forest fires, communication failures, and conducting perilous search and rescue missions are just the start... you'll face many more natural disasters throughout your missions.

2014 edition comes with brand new Sightseeing Mode Challenge, that will allow pilots to explore each island in search of beautiful, but sometimes hard to reach spots with ultra-light helicopter. And if that's not enough there are lots of achievements to unlock. Game engine was also upgraded with newer shader effects to achieve even more stunning visual quality.

Game features:

- 10 different helicopters
- 45 various missions
- over 400km² of terrain
- changing weather conditions
- well-balanced flight controls
- fully configurable controller support
- sightseeing mode in free play
- Steam achievements

Title: Helicopter Simulator 2014: Search and Rescue

Genre: Simulation

Developer:

VipaGames

Publisher:

VipaGames

Release Date: 28 Feb, 2014

a09c17d780

Minimum:

OS: Windows XP/Vista/7/8

Processor: Core 2 Duo 1.8GHz or AMD equivalent

Memory: 2048 MB RAM

Graphics: 1024 MB GeForce 9600GT or Radeon equivalent with OpenGL support

DirectX: Version 9.0c

Storage: 2700 MB available space

Sound Card: OpenAL compatible

Additional Notes: Laptop versions of graphics cards may work but are NOT officially supported.

English,French,Italian,German,Czech,Dutch,Hungarian,Polish

While most people knock this game for it's bad controls and graphics, I for one, am having a great time with this game. I find the controls are odd at first, but then again I've never flown a helicopter. While I do not have a joy stick, the keyboard controls are completely customizable and are becoming much easier with play. In my opinion they do not inhibit gameplay at all. Besides its comic relief when you accidentally blow up from hitting a tree because you put too much deceleration while trying to land. The blurry graphical "problem" that I've seen mentioned can be easily fixed in the options menu by turning off depth blur and movement blur. All in all, I think this is a fun simulator that is worth giving a shot. I would suggest waiting to pick it up on while it's on sale though.

P.S. you get to pick up a beached whale in the third mission. Controls: 2/10

Graphics: 4/10

Playability: 4/10

Did I have fun? No.

Did I complete a mission? No

Why did I not complete that mission? I couldn't take off, once I figured out how to take off I almost instantly fell out of the sky and bounced around like a bouncy ball.

Do I recommend: Yes if you are stupid

Do I recommend: No.. Game doesn't work. Tried everything. Not my Computer. No support. Waste of Money. Dont buy this game !. YES! I've been waiting for a game like this. This game is lots of fun, entertaining and you can spend many hours of interesting tasks to solve. Helicopter Simulator 2014 Search and Rescue is entertainment, fun and excitement for everyone, but not for the hardcore flight simulation player. You can not save during the play, but that is not negative, because the missions get thereby a higher voltage and you have to stay on task. You can pause at any time by pressing the ESC key. The maps are freely accessible, you can fly around everywhere or walk around. It has many different camera views, from inside cockpit and from outside and zoomable. First Person and Third Person. The missions and objectives are imaginative and exciting. While it is not a simulation in burlap sense, nevertheless one must always be careful how and where you fly. Transport rack system can alter the flight characteristics. You have sent the helicopter control as obstacles such as houses, trees, cranes, etc. are available.

I can recommend this game each of you with helicopters performing work orders such as search, rescue, transport etc. Most Helicopter simulations are either primitive and boring or have a very complicated and complex mechanism in the control. In this game, you have to not torment with complicated skilled technical details. The keyboard is completely configurable. I like to play with mouse and keyboard but you can also use the joystick. With the latest update, many problems have been solved and I have found no more bugs. The sound of the helicopter is acceptable. The graphics quality is not comparable to modern expensive high-end games, but for the pure helicopter jobs, it is sufficient. An increase of the development potential in the graphic quality would be desirable, because who does not fly like a beautifully designed landscape. ;-) I play with a resolution of 2560x1440 and the game runs very smoothly. For this game, I would have gladly paid more. Compared to other helicopter games it is more than worth the money.

My personal opinion, the negative reviews of the hardcore simulation players, the game does not do justice. it's not a arcade game but also no real simulation. It is for those players who want to play the exciting helicopter missions like, who like to carry out support orders and a challenge in solving complex and tricky requirements with the atmosphere and the thrill of a helicopter, but their playing time do not want to invest in complicated technical manuals and control.

. bad game need to make some fixes and bad control

. Doesn't work with logitech joystick..

Completely unplayable with keyboard..

I've been in contact with support and they won't help me.. They just keep saying "But it should work".. Well, it doesn't!?

>>>DO NOT BUY<<<. I was a fan of the old SAR series, and spent many hours with SAR 1 through SAR 4 Coastal Heroes, as well as Vietnam MedEvac of the same lineage. For a long time, I have hoped for a helicopter game to carry the torch for SAR and was excited to see Helicopter Simulator 2014 Search and Resue here on Steam.

Then I read the reviews, and hesitated to buy it, but then today I decided, heck it is not expensive, I will see for myself, there are some good reviews, even if they seem drowned out by the negative.

Well, I am happy I tried it anyway, after some initial admitted pain in setting up the controls in a way I like them, I finally spent time playing, and I am having a great time so far. Honestly, I wonder how much of the negative may be due to control setup. This was certainly a bit unusual in how it works, but with a little time and effort, it is not insurmountable.

For any old SAR fans who are unsure whether to get this because of bad reviews, I think if you enjoyed SAR, there is a lot to enjoy here as well. So go for it.

Terrible controls, bad graphics and boring gameplay. Avoid at all costs. Not even worth it during a Steam sale, just stay far away from this trainwreck.. First Look: <http://www.youtube.com/watch?v=jo0QSSho8Po>
Ignore the "Helicopter Simulator" section of the game name, as it's not really a proper simulator of helicopter flying. I saw people asking in the discussions about things like trackIR, pedals and joysticks. This really isn't that sort of game so definitely don't buy it if that's what you're looking for. This is a search and rescue game that basically gives you a helicopter with basic controls (which are okay to handle but I found it a bit difficult on the landing) and gives you a number of missions where you must go and save people in various conditions.

The gameplay is very basic, and really feels quite dated. In the first mission I played it had strange requirements that made no sense. Why do I have to be at a certain height for a man to go down a rope to pick someone up? It's like artificial difficulty because the game would otherwise be rather mundane. Sadly it had the opposite effect as it just made it needlessly annoying.

The draw distance for detail on the ground is very poor so you have to be pretty much crashing into the trees below to see them appear at the same detail you'd have when you were on the helipad. The models are simple and textures are relatively low quality. The cockpit view was a definite disappointment. It didn't run all that well either, and didn't feel at all optimized. The loading screens were also abnormally long.

In comparison to the detailed and thoughtful "Car Mechanic Simulator" title they released recently, this is a huge drop in quality. I'm not saying you should steer well clear of this game, but I wouldn't recommend it either.. Game wont load past start up screen and there is no help from developers to try and get it working or refunding my money.

So wouldnt advise anyone else to waste their money.. There is a disturbing lack of men in speedos with fluorescent nipples. Not a helicopter simulator at all/10.. The flying in this game is completely absurd, the physics are horrible, and even at max settings the graphics are sub-par. A better use for the ten bucks I spent on this game would have gone to buying a second copy of Arma II, a game which I believe very nearly nailed flight physics.

THIS game, however, took everything that 5 year old game had, and threw it out the window. I bought this game expecting to be able to fly, not flounder in the air in a physics-defying "helicopter simulator". This game is absolutely terrible. The controls are near to impossible to handle, there are no full control dictation of the helicopters, meaning you just pull up to the area and it switchees views and modes, the graphics are almost horrendous to begin with. I am glad i got this game on sale and only spent .69 cents for it, but even then, the game is barely worth that.. Helicopter simulator with GTA-like controls is not a simulator.. Stupid game, slow, controls often not working and just boring

. Search and Rescue may not be for the hardcore flight simlatoon gamer. It is not fully realistic, but still you'd better have a Joystick with some axes for it. It is somewhere in between of Simulation and Arcade.

Compared to Sim copter this title is more simulation and more serious. Where in Sim copter you flew around in a city and things happened which you had to clear, in this game you can fly around on different Island maps and things only happen, when you start a mission with a specific objective each. For each mission you can choose one of the helicopters that can do the job (not every Helicopter is available in every mission). There is no career mode where you get better Helicopters after some time of playing. At least there is no career mode, yet.

What makes it absolutely worth it's money is the feedback of the devs and the overall communication between customers and developers. Main Problems that people had with the release version already are solved a few days after release. Other things are going to be implemented soon to improve the game experience.

There's a lot of crappy simulators out there, but it seems like the devs of SaR do everything for this game not to be one of them. And so far, they're doing a good job.

A few improvements here and there, and in my oppinion this game could be worth more money.

Graphic junkies might be a little bit diasappointed, but for everyone else the graphics are absolutely appropriate.

The music is annoying after a while, so I already set it off.

All in all, If you want to extinguish fires, carry stuff around and rescue people with a helicopter, this game is for you.

Could it be better ? Yes

Is it still fun ? Yes

Is it worth its money ? Yes

Is there support ? Absolutely Yes
